IMPORTANT: This document provides **information you need to know before completing the online application form**. Please read the document in its entirety as it explains what you are applying for.

1 INTRODUCTION

1.1 Flatback Turtle Biology

The flatback turtle (*Natator depressus*) is endemic to Australia and is found nesting on mainland and island beaches across the northern coast (Limpus 2009). The current status of this species on the IUCN Red List is Data Deficient (IUCN 2013), while it is listed as Vulnerable under the Environmental Protection and Biodiversity Conservation (EPBC) Act (1999). Its common name (i.e. flatback) is derived from the shape of its shell (carapace), which appears flatter when compared with other marine turtle species. The carapace lacks keratin and distinctively curves up at the margins. The flatback is a medium-sized marine turtle (average curved carapace length 900 mm) and are grey, grey-green, or olive in colour (Spotila 2004).

Mundabullangana and Barrow Island flatback populations are considered significant due to the size of their rookeries, with around 2,000 turtles nesting per year at each site (Pendoley et al. 2014). Flatback turtles generally breed every one to three years (average two years) and lay up to four clutches of around 50 eggs between October and February in a nesting year (Pendoley et al. 2014). Nesting activity at Barrow Island peaks between late November and January each season, with the peak activity at Mundabullangana occurring slightly earlier between the beginning of November and December. After an incubation period of approximately six weeks, the eggs hatch and the hatchlings immediately make their way to the ocean. When offshore, flatback turtles do not have an oceanic phase to their lifecycle, and instead remain on the continental shelf (Hamann et al. 2009). It is thought that females reach maturity at about 15 - 30 years of age, after which they will return to their natal (birth) beach or island to lay their eggs.

Figure 1: Adult flatback turtle; flatback turtle track; and flatback turtle hatchling.

1.2 The Gorgon Gas Development & Barrow Island

Chevron Australia has operated an oilfield on Barrow Island since 1964. The Gorgon Gas Development, operated by Chevron Australia and in joint venture with ExxonMobil and Shell, was given approval to develop the Greater Gorgon gas fields, which contain 40 trillion cubic feet of gas. The gas is being piped to an LNG processing and shipping facility that were constructed on the east coast of Barrow Island between 2010 and 2017. Chevron Australia is committed to protecting the conservation and biodiversity values upon Barrow Island and provides full support for the marine turtle monitoring program. One part of this monitoring program involves the Flatback Turtle Tagging Program that has been conducted by Pendoley Environmental since 2005/06. The Program is designed to assess and monitor the status of the nesting flatback turtle population on the east coast of Barrow Island so that any impact from the Gorgon Gas Development can be identified. Equivalent studies are also undertaken at a reference beach located on the mainland at Mundabullangana Station, west of Port Hedland. **Figure 2** shows the location of the two sites in WA, and the closest major town.

Figure 2: Location of Barrow Island and Mundabullangana and nearby town of Port Hedland.

2 PROGRAM COSTS

The Barrow Island and Mundabullangana Station Flatback Turtle Tagging Program is **FREE***.

2.1 Costs covered by the Program

Costs covered by the Program include:

- flights to and from Barrow Island or Port Hedland;
- pre-mobilisation medical;
- field equipment and PPE such as safety or hiking boots;
- accommodation and meals while at Barrow Island or Mundabullangana Station; and
- insurance – volunteers are covered during the course of their volunteer duties under the Pendoley Environmental Public Liability and Volunteer insurance policies.

2.2 *Costs not covered by the Program

The following costs are not covered by the Program:

- travel to and from Perth from regional WA, interstate. or overseas;
- accommodation in Perth (including accommodation required following demobilisation for a Tropical Cyclone);
- travel to and from:
 - the airport;
 - the volunteer medical; and
 - information nights (all of which take place in Perth).
- your time.

3 PRE-SELECTION

To be eligible for selection as a Volunteer on the Flatback Turtle Tagging Program you must:

- be **18 years** or older at the time of participation in the program;
- be fit and healthy (capable of walking up to 15 km per day on a sandy beach for up to 16 nights in hot/humid conditions while carrying a backpack and tagging turtles);
- complete the online application form on the Pendoley Environmental website; and
- attend an Information Night held in Perth (with the exception of remigrants¹ and interstate applicants²).

¹Remigrant – returning volunteer. The term ‘remigrant’ also refers to a nesting female turtle that has been recorded nesting at a particular nesting beach before and has returned, or remigrated, to the nesting beach in a different subsequent year to nest again.

²Interstate applicants may be offered a phone interview as an alternative to attending an Information Night.

3.1 Online Application

Online applications will be open between **Tuesday 20th July** and **Sunday 5th September 2021**. Applications submitted after the closing date will not be considered. When completing your online application form you will be asked to indicate your availability for Information Nights and Tagging Groups.

3.1.1 Information Night Preferences

There are limited seats at each Information Night, so please indicate *all* sessions for which you are available (see **Table 1**). You will receive an email from the Pendoley Environmental Volunteer Coordinator shortly after you apply detailing what Information Night you have been assigned to. In addition, an official invitation/reminder for each of the Information Nights will be distributed on Monday 6th September 2021.

Note: *If you are unable to attend any of the scheduled Information Nights, you **may** be granted a phone interview with a Pendoley Environmental Staff member.*

Table 1: Information Night schedule.

Information Night	Date	Venue
1	Wednesday 15 th September 2021	Swan River Rowing Club 2 The Esplanade Canning Bridge, 6153
2	Thursday 16 th September 2021	
3	Monday 20 th September 2021	
4	Tuesday 21 st September 2021	

3.1.2 Tagging Site Preferences

During your application, you will be asked to indicate your preference between Barrow Island and Mundabullangana Station.

Please be aware that Mundabullangana is a cattle station that, due to its remoteness, does not provide alternative food options for vegan, vegetarian, or gluten/lactose free diets. Barrow Island caters for all diets, so please select this site only if you have any dietary requirements.

We will do our best to place successful volunteers at their preferred location, but as places on the program are very competitive you may not be offered your preferred location. This also means that you will significantly improve your chances of selection by not having a specific preference for when and where you go, i.e. having a greater availability.

3.1.3 Tagging Group Preferences

You will also be asked to indicate which Tagging Groups you are available for (see **Table 2**). Please select **only** the groups for which you are genuinely available. If you only want to go to Barrow Island, then select **only** the Barrow Island groups. If you want to go to Barrow Island but are willing to accept a position at Mundabullangana if you miss out, then please select both tagging site groups.

Table 2: Tagging group dates and duration.

Location	Group	Start Date	End Date	Duration
Mundabullangana Station (MDA)	1	Fri 05/11/2021	Sun 21/11/2021	17 days
	2	Sun 21/11/2021	Tue 07/12/2021	17 days
	3	Tue 07/12/2021	Thu 23/12/2021	17 days
	4	Tue 28/12/2021	Thu 13/01/2022	17 days
Barrow Island (BWI)	1	Wed 24/11/2021	Wed 08/12/2021	15 days
	2	Wed 08/12/2021	Thu 23/12/2021	16 days
	3	Wed 29/12/2021	Thu 13/01/2022	16 days
	4	Thu 13/01/2022	Fri 28/01/2022	16 days

3.1.4 Confirmation

If your online application form is successfully submitted, the system will generate an automated response to the email address you provided. Please allow a few minutes for the response to come through (if it does not come through then please contact volunteer@penv.com.au).

Note: Check your email (including spam/junk folder) to confirm your application has been received.

4 INFORMATION NIGHTS & SELECTION

Information nights will be managed to ensure compliance with COVID-19 restrictions in place at the time. This could include maintaining social distancing, use of hand sanitiser, wearing of masks, and ensuring group sizes are kept to a minimum and in compliance with the total space of the venue.

4.1 Presentation

The Information Night presentation will provide information about the Gorgon Gas Development, flatback turtles, Barrow Island and Mundabullangana, an overview of the flatback turtle tagging program, administrative and training requirements, accommodation, and recreational activities available on site.

After the presentation you will have the opportunity to ask questions and speak with Pendoley Environmental staff about the Volunteer tagging experience.

4.2 Group Activities

The main purpose of the Information Night is to facilitate the selection of Volunteers. After the presentation you will be separated into small groups, assigned a Pendoley Environmental staff member, and then participate in group activities. Your participation and interaction within your group will allow your Pendoley Environmental assessor to determine your suitability.

Note: Group activities may involve sitting or kneeling on the floor, so please wear sensible/comfortable clothes on the night.

4.3 Selection

Selection for the Volunteer Program is **very competitive**. Last season, there were 300 applicants applying for the 88 Volunteer positions. There are also Reserve positions available which are used in the event a Volunteer position re-opens (historical figures show that a very high percentage of selected Reserves make it onto the Program).

Selection for the Program depends on a number of factors including (in no particular order):

- your Information Night group activity assessment;
- your previous experience;
- your availability (greater availability means you are more likely to be offered a position);
- your previous application history;
- your online application information; and
- your location (e.g. there may be COVID-19 related inter- or intrastate travel restrictions in place at the time of volunteer selection).

4.3.1 If you are Selected

If you are selected for the Program (Volunteer and Reserve positions) you will be informed by **Friday 1st October 2021** and sent the *Information for Selected Volunteers* Booklet.

Prior to participating in the program, you will need to complete the following training requirements which will be booked directly by your Volunteer Co-ordinator:

- pass your Volunteer Medical (half day);
- complete online training modules (about two hours);
- complete your Defensive Driver Training if you are selected as a driver at Mundabullangana (1 day); and
- provide copies of your training certificates to the Pendoley Environmental Volunteer Co-ordinator.

4.3.2 If you are not Selected

If you are not selected, we encourage you to put your name down as an option for a Reserve position or apply again in future seasons.

5 WHAT TO EXPECT ON THE PROGRAM

Note: Consumption of alcohol at any time during the Program is prohibited. Persons caught drinking alcohol will be removed from the Program immediately. Volunteers and staff will be subject to random Drug & Alcohol testing in accordance with Site Policy.

5.1 COVID-19 Controls

There may be additional requirements prior to mobilising to site and when on-site that relate to managing the risk of COVID-19 infection. These likely include avoiding physical greetings such as handshakes, social distancing, external temperature checks, wearing of masks (mandatory when travelling to site), use of hand sanitiser, cleaning equipment, and following good personal hygiene.

5.2 Pre-Departure Training Evening (Barrow Island Volunteers Only)

Pendoley Environmental will host a pre-departure training event for Barrow Island Volunteers at their Perth based office (12a Pitt Way, Booragoon, WA 6154). One training event will be held for each Barrow Island tagging group and will be scheduled on an evening close to the mobilisation date. Details of the evening will be provided upon selection.

Note that attending the training event is not mandatory, however we strongly encourage you to attend as it gives you the opportunity to meet the rest of your Volunteer Tagging Group and ask any last-minute questions prior to your departure. You will also be shown the methodology for tagging flatback turtles and review the Standard Operating Procedure.

5.3 Behaviour while Onsite

Everyone onsite has a right to work in an environment that is respectful. It is therefore a responsibility for all Volunteers to treat everyone they meet onsite with consideration and respect. Respectful behaviour displays personal integrity and professionalism, demonstrates respect for individual rights and difference, practices fairness and understanding, and encourages accountability of actions. A respectful workplace:

- is inclusive;
- values diversity;
- clearly communicates expectations around behaviour;
- promotes employee health and safety;
- strives for improvement; and
- has open channels of communication.

5.4 Day One

5.4.1 Barrow Island

When you arrive at your work site you will be assigned a room in an accommodation block, and allowed to get yourself settled in. Under the direction of the Pendoley Environmental Field Team Leader you will then be required to attend:

- an on-site kick-off meeting; and

- tagging training (for anyone who could not attend the pre-departure training).

You will then attend an evening toolbox meeting to discuss the plan for the night and sign on to the Job Hazard Analysis (JHA). As a group, you will then head to the nesting beaches where the Field Team Leader and their Assistant will conduct some practical tagging demonstrations with any encountered nesting flatback turtles. Then, once fully trained and under supervision of the Field Team Leader or Assistant, it will be your turn to read the tags of a turtle or, if necessary, tag a turtle.

5.4.2 Mundabullangana

As per **Section 5.4.1**, however because there is no pre-departure training for Mundabullangana Volunteers, you will be given the first night to rest and adjust yourself to nightshift.

5.5 Day Two Onwards

5.5.1 Barrow Island

Once the Field Team Leader is confident in your tagging ability (and your ability to work safely in the field), you will be divided into tagging pairs and assigned a beach section to patrol for the night. A typical night will include:

- onsite safety ('toolbox') meeting to plan the shift and discuss hazards and controls;
- equipment checks;
- drawing a 'line' along the beach in order to identify the tracks of new or missed turtles;
- patrolling the high tide line during the night-time beach survey (8 – 9 hours in duration);
- walking on sand in safety/hiking boots and other PPE for up to 15 km to monitor nesting flatback turtles;
- sighting turtles and waiting for a suitable time to approach;
- bending down to tag and restrain turtles;
- scanning turtles for PIT tags, collecting and recording relevant data;
- removing barnacles from existing flipper tags; and
- applying new flipper and PIT tags when required.

Each day's nightshift will be conducted around the night-time high tide or as determined by the Field Team Leader. Nightshifts can be tiring as they affect the daily circadian rhythm of the body and you may feel more fatigued than normal throughout the trip. However, you will have plenty of downtime during the day to rest and recover.

5.5.2 Mundabullangana

You will attend an evening toolbox meeting to discuss the plan for the night and sign on to the Job Hazard Analysis (JHA). As a group, you will then head to the nesting beaches where the Field Team Leader will conduct some practical tagging demonstrations with any encountered nesting flatback turtles. Once fully trained and under supervision of the Field Team Leader, it will be your turn to read the tags of a turtle or, if necessary, tag a turtle.

5.6 Beach Patrols

Beach patrols are hard work. You will walk up to 15 km a night on soft sand, almost always in hot, humid conditions. You will be tagging, reading the tags, and collecting data (measurements/GPS) of up to 30 turtles in one patrol. You will be required to wear safety glasses, safety or hiking boots, Pendoley Environmental tagging work shirt (supplied), full length cotton/natural fibre workpants, and gloves.

You will be required to patrol the beach each night of the survey period, with a partner, for up to eight hours at a time. What this means is that you will require a good level of fitness to avoid muscle fatigue or joint stress.

Due to shifting high tide times, beach patrols will take place at a slightly later time each night and will sometimes be required over two consecutive high tides. What this means in practice is that on one occasion during your tagging group you will have to work two shifts in one 24-hour period.

Heat stress and fatigue are very real hazards for work in the Pilbara. To minimise the associated risks, you will need to:

- drink lots of water;
- get plenty of rest;
- look out for each other; and
- report immediately to the Field Team Leader if you (or another Volunteer) feel unwell.

6 BARROW ISLAND

Figure 3: Volunteers on an excursion at Barrow Island; Lufkin at Barrow Island; Volunteers preparing for night survey on Barrow Island; nesting turtle at Yacht Club South beach.

Barrow Island is a 23,400-hectare island located 88 km from the north-west of Onslow. Western Australia's second largest island, it is a Class A Nature Reserve, providing habitat for 14 mammal species, more than 110 types of birds, 54 reptile species, and over 350 native plant species. Four species of marine turtles either nest on Barrow Island and/or forage in the waters surrounding the island.

The Flatback Turtle Tagging Program focuses on the eight most populous flatback turtle nesting beaches, all located along the east coast of the island.

The construction phase of the Gorgon Gas Development on Barrow Island was completed in 2017 and is now operational.

6.1 Travel

Flights to Barrow Island are arranged by Pendoley Environmental and operate from Cobham Airport, Perth

6.2 Accommodation and Facilities

You will be assigned your own private room, complete with ensuite. Your linen/towels will be provided, and your room regularly cleaned (regularity dependent on circumstances at Barrow Island). You will have access to laundry facilities and free laundry powder.

You will have access to a pool, a gym, and a shop which stocks toiletries, confectionery, snacks, soft drinks etc. purchased at your own expense.

6.3 Meals

You will dine at the camp 'mess', buffet style. Vegetarian and vegan diets are well catered for, and meals are labelled for those with common special dietary requirements (i.e. dairy- or gluten-free). Takeaway meals (known as 'Crib') are available during periods when your work shifts overlap with the mess opening hours (we encourage you to bring your own reusable containers for food storage). Note that Pendoley Environmental has no control over the food that is served on Barrow Island.

6.4 Recreation

Barrow Island is an A-class nature reserve, and an active operating major resource development. For the sake of Barrow Island's ecology, and your own safety, you will have very limited opportunities to partake in recreational activities outside the camp.

Island tours *may* be arranged but cannot be guaranteed. There are restricted areas outside camp for walking/cycling. There is strictly no swimming (or wading) in the ocean due to the presence of dangerous 'stingers'.

Recreational activities available within the confines of the camp include:

- yoga;
- tennis;
- darts;
- table tennis;
- badminton;
- pool/snooker;
- gym/fitness classes; and
- swimming.

6.5 Communications

If you are on a Telstra plan you will have mobile phone reception within the camp. Otherwise, calls to Perth landlines are free of charge from phones in your room. For calls to other numbers, phone cards can be purchased from the shop. Wi-Fi is available throughout the accommodation rooms.

Note: *Volunteers must adhere to the Gorgon Project Mobile Phone Policy. Mobile phones are not permitted in work areas, or otherwise outside the camp (including when participating in recreational activities).*

7 MUNDABULLANGANA STATION

Figure 4: Volunteers at the entrance to Mundabullangana ; station homestead; livestock; flatback turtle (Munda Main Beach).

Mundabullangana Station is located on the Western Australian mainland approximately 60 km southwest of Port Hedland. It is a working station spanning approximately 500,000 acres and home to approximately 10,000 head of cattle. It is host to a significant flatback turtle rookery, located on the beaches to the north of the station. This population of flatback turtles appears to be discrete from the turtles found on Barrow Island, located approximately 280 km to the west.

7.1 Travel

To get to Mundabullangana you will fly from Perth domestic airport to Port Hedland. Note that Volunteers cannot make their own way to the site. There will be an opportunity to purchase last minute supplies at South Hedland Shopping Mall prior to departure for the station. The drive to the station takes approximately 1.5 hours.

Note: Your arrival at Port Hedland is your last opportunity to stock up on your favourite snacks/drinks. Mundabullangana is very remote, and supply runs will be made only when absolutely necessary.

7.2 Accommodation and Facilities

At Mundabullangana you will be accommodated adjacent to the homestead. You will likely have to share a room with another Volunteer of the same gender. Your linen/towels will be provided and will be changed

once a week (depending on circumstances at the station). All rooms are air conditioned and fitted with blackout curtains for sleeping during the day.

Bathroom facilities are communal (and gender specific). You will have access to laundry facilities and free laundry powder.

At times you may be required to clean your own room, bathroom, or wash linen.

7.3 Meals

Mundabullangana is a cattle station that, due to its remoteness, does not provide alternative food options for vegan, vegetarian, or gluten/lactose free diets. Meals are prepared by the cattle station cook and served in a communal kitchen.

7.4 Recreation

The recreation room is equipped with a TV, Foxtel, and a fridge for the sole use of the Volunteers. You are also encouraged to bring your own games, books, board games, playing cards etc. There is an open grass area where football, soccer, Frisbee or other outdoor games can be played.

Recreational field trips (i.e. fishing trips) around the station will be organised by the Field Team Leader (fatigue dependent).

7.5 Communications

If you are on a Telstra plan you will have mobile phone reception in particular areas at the Mundabullangana Station. The kitchen landline phone is also available for volunteer use, but there are no free calls out (i.e. you will need to purchase a phone card prior to arrival). There is limited WiFi internet access and will be made available to volunteers at the discretion of the Field Team Leader (dependent on data allowance and use).

8 PERSONAL PROTECTIVE EQUIPMENT

As a Volunteer you will be required to dress in accordance with the Health, Environment, Safety and Quality (HESQ) Plan, and in accordance with any additional site rules. You will also need to supply some of your own gear (see **Table 3**).

Table 3: Field dress.

Item	Specifications	Provided by	
Safety/hiking boots*		Program*	
Sun hat	Wide-brimmed or legionnaire-style	Volunteer	
Safety glasses		Program	
Hi-vis shirt		Program	
Trousers	Full length, natural fibre, loose fitting (note: use of jeans for fieldwork is not recommended)	Volunteer	
Gloves	Full and Fingerless	Program	

**Volunteers are requested to purchase safety/hiking boots up to the value of \$200 and are reimbursed upon provision of receipts.*

Note: It is very important that the trousers you take to site are made of natural fibre i.e. 100 % cotton. This is to ensure compliance with onsite requirements.

8.1 Camp Dress

The general dress requirement for both camps is to dress practically and modestly.
